

corsets.

Suspension and Control Systems

Suspension systems act as an anchor point, aiding stabilisation of the prosthesis. They vary in design from simple webbing to full elasticated

Where body motion is utilised to operate an elbow or terminal device, control system kits are available in a number of different cable materials, together with all associated guides, pulleys and terminal device connections.

The control system is linked to the suspension to provide an operating harness.

Suspension and Control Systems - Transhumeral

Transhumeral Suspension Kit

| Supplied in peach nylon. Three-point socket attachment, elastica adjustable by means of a buckle system. 19mm kits for use with | | | | |
